

**All Green Recycling Inc. and its Precious Metals Recovery System (AGR) is
Honored as Best in the World for the Environment and
Creating Most Positive Environmental Impact and Community Outreach**

For Immediate Release
September 5, 2019 Charlotte, NC

All Green Recycling Inc. and its Precious Metals Recovery System (AGR) was recognized for being among companies creating the most positive environmental impact based on an independent, comprehensive assessment administered by the nonprofit B Lab.

“AGR is honored to be named to the Best for Environment list, which includes businesses that earned an Environment score in the top 10 percent of more than 2,600 Certified B Corporations on the B Impact Assessment”. Quoted Carol Jegou, CEO “We are so pleased to have this honor for the second time”.

The full assessment measures a company's impact on its workers, community, customers and the environment. To certify as B Corporations, companies like All Green Recycling must complete the full assessment and have their answers verified by B Lab.

The Environment portion of the B Impact Assessment evaluates a company's environmental performance through its facilities, materials, emissions, and resource and energy use. Companies answer questions about their transportation/distribution channels and the environmental impact of their supply chain. The assessment also measures whether a company's products or services are designed to solve an environmental issue, including products that aid in the provision of renewable energy, conserve resources, reduce waste, promote land/wildlife conservation, prevent toxic/hazardous substance or pollution, or educate, measure or consult to solve environmental problems.

Honorees scoring in the top 10 percent set a gold standard for the high impact that business as a force for good can make on nature around the world.

About AGR (www.allgreenpmr.com)

AGR is a certified B-Corp and an Environmental Service company and developed and patented an environmentally safe way to extract precious metals from circuit boards. Our Patented Technology and Trade secrets are a *Game Changer* in the way circuit boards are processed today.

“We are the industry leader with the most environmentally sustainable method of extracting valuable commodities (gold, silver, platinum, and palladium) from circuit boards without using harsh chemicals, producing “Conflict-Free Green Gold” states Carol

Jegou Chairman and CEO AGR. From the perspective of Corporate Social Responsibility and “Sustainability”, the overall benefits of achieving a more responsible solution for recovering scarce natural resources and preventing environmental damage go far beyond the economic value of the resources recovered.
